

<pointer>

```
graph TD; P["<pointer>"] --> H["<header>"]; H --- A1["<argument>"]; A1 --- A2["<argument>"]; A2 --- D["..."]; D --- A3["<argument>"];
```

The diagram illustrates a pointer variable, represented by a box labeled "<pointer>", which points via a curved arrow to the first cell of a horizontal sequence of cells. This sequence represents a linked list structure, starting with a "<header>" cell, followed by a series of "<argument>" cells, with an ellipsis indicating that there can be more than two arguments.
